5. API Demo
6. Continuous Integration
7. Results
8. Conclusion

Old Frontend:

Scale nodes and edges depending on their value. Hover over the edges to get a popup with more information.

Frontend Interface:

Welcome to Mastodon Visualizer!

Enter your username and server domain of your Mastodon account to see the social network visualizer made just for you.

Username

Server Domain

SUBMIT

[join Mastodon](#) [What is my username/server domain?](#)

Problems Faced

1. Basic integration with backend API
2. Display the relationships
3. Updating the graph as per user entry
4. Making the website as responsive as possible

Backend

1. Initial data in nested format: ex. account1 {followers:[account2:{followers:[account4: {}, account5: {...}], following: [...]}], account3: {...} ...], ...}
2. New Version: list of nodes (account info), list of edges (following relation)

Benefits:

1. No repetitive Mastodon API calls.
2. Faster response time for max 10 followers/following for each account.
3. 40~s -> less than 5 seconds.

API: [GET/api/v1/account/{id}/initialize](#)

Status: 200 OK Time: 4.87 s Size: 10.68 KB

Save as example ...

Problems Integrating Mastodon API

1. API documentation is not very helpful.
2. Each Mastodon server has their own instance of the Mastodon API.
3. Servers are not sync with each other.
4. Different results from different server's APIs.
5. User ID on each server is different for the same user.

Swagger

TODO: Add description

default

GET /api/v1/account/{id}/initialize

Get all necessary account data

Parameters

Name	Description
------	-------------

id • required
(path)

Exec

etag: W/"29a7-McGmuvk2VSck0MF4MLw78iSvqJog"
keep-alive: timeout=5
x-powered-by: Express
```

Responses

- Fetch ID

Receive Connections and Relations

Database Problems

1. Making the decision:
2. GunDB is difficult to query
 - a. Benefits of GunDB
 - i. Local-first
 - ii. Lightweight and portable
 - iii. Graph database
 - b. Bad interface to make queries
3. Implementing proper design pattern (adaptor, dao) in JS
4. Lack of proper learning resources (Ex. Too abstract or too simple)

Continuous Integration
